EXPERIENCE

CGI

Hartford, CT

Software Engineering Intern

Jun 2026 – Present

- Led Agile/Scrum delivery for a 3-engineer team building an AI-powered AWS Infrastructure Clone Agent Framework on AWS Lambda and Bedrock Agents: owned the backlog across two project phases and four two-week sprints, structured user stories, and ran daily standups that kept frontend and backend developers aligned and unblocked
- Built and shipped a Bedrock Agent automation pipeline in Python and boto3, running on AWS Lambda, that snapshot-mirrors 3 S3 buckets to Google Cloud and Azure for disaster-recovery failover, now running in production for 2 engineers on CGI's team
- Diagnosed a UNIX permission issue blocking the team's FSx for NetApp ONTAP integration by tracing IAM role-assumption errors through CloudTrail logs, then resolved it — unblocking a workstream that had been stuck since April within the first two weeks on the project
- Redesigned the team's local-testing architecture around CGI's enterprise MFA and IAM restrictions, partnering with cloud architects to migrate scripts into AWS Lambda and establish a secure three-tier system
- Designed the workflow for an automated QA agent that replaced manual, file-by-file testing with an automatic test suite run against every Bedrock-deployed AWS resource, syncing pass/fail status directly to Jira and closing the loop on an end-to-end DevSecOps pipeline
- Co-authored a technical white paper and presented cloud-native data fabric architecture (AWS/GCP) to senior leadership, translating infrastructure concepts for non-technical stakeholders

Connecticut Dept. of Developmental Services

Hartford, CT

Direct Support Worker

Aug 2025 – Present

- Support two individuals with developmental disabilities, refining behavior and transition plans based on independent research and escalating clinical observations to nursing staff

Manchester Community College, Academic Support Center

Manchester, CT

Academic Support Assistant

Jan 2023 – May 2023

- Guided students through academic resources and coordinated scheduling across departments

PROJECTS

S3 Public-Access Misconfiguration Detector | *Python, boto3, AWS Lambda, EventBridge, SNS, Terraform*In Progress

- Building an automated scanner that detects public S3 bucket misconfigurations and sends real-time SNS alerts
- Designing auto-remediation with dry-run guardrails to prevent unintended production changes
- Deploying via Terraform with modular, reusable infrastructure components

Medicine Reminder System | *Java, Custom Data Structures*

Nov 2025

- Built a desktop app implementing a BST, queue, and linked list from scratch using test-driven development

Personal Portfolio Website | *React, Node.js, Netlify, Git/GitHub*

2025

- Designed and shipped a personal portfolio site, live at xaviermckenzie.netlify.app

EDUCATION

Central Connecticut State University

New Britain, CT

B.S. in Computer Science, Software Engineering Concentration

Expected Dec 2027

Manchester Community College

Manchester, CT

A.A. in Computer Science

Aug 2022 – May 2025

- Dean's List: Fall 2022, Fall 2023

TECHNICAL SKILLS

Languages: Python, Java, JavaScript, SQL, C

Cloud & AI: AWS (Lambda, S3, Bedrock Agents, EventBridge, SNS, IAM, FSx for NetApp ONTAP), REST APIs, LLM-Integrated Automation, Terraform, DevSecOps, CI/CD

Frameworks: React, Node.js, HTML, CSS

Developer Tools: Git/GitHub, MySQL, Jira, Agile/Scrum
